

PHP Exercise Q2 Answered

Create an **Employee** class that includes three pieces of information as data members:

- first name
- last name
- monthly salary

The class should have a constructor that initializes the three data members. Write setters and getters for each of the data members. If the monthly salary is not positive, set it to 0.

- i. Create a set of test data and then write a program to test the class.
- ii. Write some code to give each employee a 10% pay raise.
 - a. Create a set of test data and then write code to test the pay raise.

```
<?php

class Employee
{
    private $firstName = "";
    private $lastName = "";
    private $monthlySalary = 0;

    public function __construct($firstName, $lastName, $monthlySalary){
        $this->setFirstName($firstName);
        $this->setLastName($lastName);
        $this->setMonthlySalary($monthlySalary);
    }

    public function setFirstName($firstName){
        $this->firstName = $firstName;
    }

    public function getFirstName(){
        return $this->firstName;
    }

    public function setLastName($lastName){
        $this->lastName = $lastName;
    }

    public function getLastName(){
        return $this->lastName;
    }

    public function setMonthlySalary($monthlySalary){
        if($monthlySalary >= 0){
            $this->monthlySalary = $monthlySalary;
        }
    }

    public function getMonthlySalary(){
        return $this->monthlySalary;
    }
}
```

PHP Exercise Q2 Answered

Comment	Input Data	Expected Result	Status	Date
Negative Monthly Salary	first name = "Jane" last name = "Doe" monthly salary = -1	getFirstName() = "Jane" getLastName() = "Doe" getMonthlySalary() = 0	PASSED	9/5/2014
Zero Monthly Salary	first name = "John" last name = "Do" monthly salary = 0	getFirstName() = "John" getLastName() = "Do" getMonthlySalary() = 0	PASSED	9/5/2014
Positive Monthly Salary (floating point)	first name = "Kofi" last name = "MDogo" monthly salary = 1.15	getFirstName() = "Kofi" getLastName() = "MDogo" getMonthlySalary() = 1.15	PASSED	9/15/2014

```

<? require 'Employee.php' ?>
<!DOCTYPE html>
<html>

<head>
    <meta charset="utf-8" />
    <title>Employee Tester</title>
</head>

<body>
    <?php
        function fequal($n1, $n2, $epsilon){
            return abs($n1 - $n2) < $epsilon;
        }

        // Turn on assertions
        assert_options(ASSERT_ACTIVE, true);
        // Failed assertions should terminate
        assert_options(ASSERT_BAIL, true);
        echo '<br>Negative Monthly Salary';
        $emp = new Employee( "Jane", "Doe", -1);
        assert($emp->getFirstName() === "Jane" && $emp->getLastName() === "Doe" && $emp->getMonthlySalary() === 0);
        echo '<br>Passed<br>';

        echo '<br>Zero Monthly Salary';
        $emp = new Employee("John", "Do", 0);
        assert($emp->getFirstName() === "John" && $emp->getLastName() === "Do" && $emp->getMonthlySalary() === 0);
        echo '<br>Passed<br>';

        echo '<br>Positive Monthly Salary (floating point)';
        $emp = new Employee("Kofi", "MDogo", 1.15);
        assert($emp->getFirstName() === "Kofi" && $emp->getLastName() === "MDogo" && fequal($emp->getMonthlySalary(), 1.15, .001));
        echo '<br>Passed<br>';

        echo '<br>All tests passed' ?>
    </body>
</html>

```

Negative Monthly Salary
Passed

Zero Monthly Salary
Passed

Positive Monthly Salary (floating point)
Passed

PHP Exercise Q2 Answered

All tests passed

Comment	Input Data	Expected Result	Status	Date
Give two employees a 10% pay raise	Monthly salary 1 = 10 Monthly salary 2 = 100	getMonthlySalary() = 11 getMonthlySalary() = 110	PASSED	9/5/2014

```
echo '</br>Give two employees a 10% pay raise';
$emp1 = new Employee("Jane", "Doe", 10);
$emp2 = new Employee("Kofi", "MDogo", 100);
$emp1->setMonthlySalary($emp1->getMonthlySalary() * 1.1);
$emp2->setMonthlySalary($emp2->getMonthlySalary() * 1.1);
assert(fequal($emp1->getMonthlySalary(), 11, .001) && fequal($emp2->getMonthlySalary(), 110, .001));
echo '</br>Passed</br>';
```
